SOFTWARE DEVELOPMENT – INTERN

WHO WE ARE

A team of professionals providing in-house developed and integrated products to businesses. Our main goal is to help Clients organize and improve their business processes using our software and know-how.

We don't shy away from integrating with third-party platforms and services when the end result brings significant value to the solution.

Our technology focus is software development using NodeJS and Angular. Nevertheless, we are not fanatic fans of a particular technology.

We believe that a good software developer should solve problems using the most appropriate tool, not the best-known technology.

That is why we have a variety of modules developed in Ruby, Lua, Terraform, Java, etc. And because we have clients all around the world, services and products like Docker, AWS, and Kubernetes are also part of our competencies.

OUR VALUES

- Knowledge is open source
- Everyone makes mistakes - what we've learned is more important
- Work and personal life must be balanced
- Collaboration leads to better results
- Creativity needs encouragement

We're looking for energetic, innovative and hard-working candidates to join our internship program for 2020!

RESPONSIBILITIES

- Develop business features, based on client specifications under the guidance of senior members.
- Participating in the design and development phase of software production.
- Receive and make code reviews of peer's work.
- Write test and resolve issues, fix defects.

REQUIREMENTS

- Experience with languages like Java, C#, Node.js, or Ruby
- Good knowledge of OOP
- Basic understanding of HTML, CSS and JavaScript
- Effective communication skills
- Good analytical thinking

WHAT DOES THE INTERNSHIP PROGRAM OFFERS?

- 3-months paid internship program
- 4-hour working day
- Dedicated Mentor for each Intern
- Option to extend the program with three more months
- Option to become a Certria employee on a permanent contract
